

# RED DAWN USB

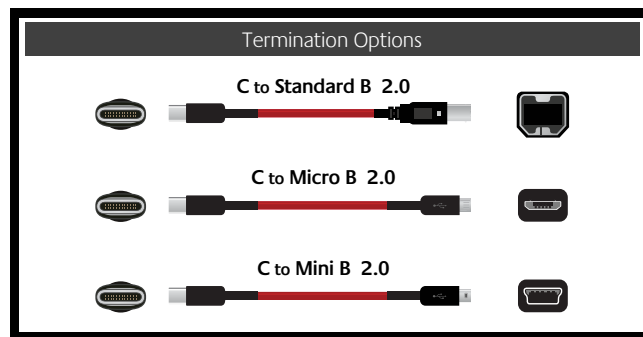

While computer audio is by no means a newcomer to the realm of hifi, developments to this ever-changing technology are keeping manufacturers on their toes, in order to stay in step with modern components. The Red Dawn USB Cable is the first of Nordost's USB options to offer USB C plug compatibility, which is quickly becoming an industry standard in the new generation of computer hardware. Nordost's Red Dawn USB Cable is the perfect solution for hifi audio enthusiasts integrating computer audio into their sound systems when using components that require USB C connectors.

The Red Dawn USB Cable uses silver-plated 99.9999%, OFC signal conductors, optimally designed for digital signal transfer. Each conductor is precision wound to correspond accurately with USB's unique, hybrid twisted pair/non twisted pair geometry. The new Red Dawn cable also utilizes Nordost's proprietary FEP Micro Mono-Filament technology, which allows it to transcend the speed and precision necessary for higher bandwidth and high speed, digital signal transmission. The conductors are then shielded with a dual layer of braid and foil shielding, in order to eliminate EMI and RFI and surpass USB 2.0 standards.

This cable is available terminated with C to Standard B (2.0), Mini B (2.0), or Micro B (2.0) plugs. The Red Dawn USB ensures that all the necessary information will be delivered with the efficiency and diligence needed to maintain the correct impedance to dramatically lift your hifi system to a new level of performance.

Designed, manufactured, and hand-terminated entirely in the USA, the Red Dawn USB Cable guarantees the accurate construction required to produce the best possible performance from computer audio equipment.

- Fully manufactured and terminated in the USA
- Fluorinated Ethylene Propylene (FEP) insulation
- Micro Mono-Filament technology
- Silver-plated 99.9999% OFC stranded conductors
- Dual layer of silver braid and foil shielding
- RoHS Compliant
- **Specially designed for USB C connectors**
